Pierre Emmanuel Gérard Ankouane

Applied AI · Client delivery and solution architecture · Founder, Afryx Labs

Leeds, UK (open to London and relocation) · ankouanepierre@gmail.com · +44 7549 394048 · linkedin.com/in/pierreemmanuelgerard · github.com/ByEmG · pierreankouane.dev

PROFILE

Applied AI graduate (BSc, May 2027) who works between clients and engineering teams: gathering requirements, designing system architecture and running iterative delivery. Currently leading requirements and delivery for a three-institution education client with a 15-person team, and acting as technical lead for an AI screening tool with a UK private clinic. Seeking graduate Solutions Engineer, Implementation Engineer, Technology Consultant or Forward Deployed roles.

EDUCATION

BSc (Hons) Applied Artificial Intelligence · University of Bradford — Sept 2023 to May 2027

On track for First Class Honours. Final-year industry project: AI-assisted patient screening for a private menopause clinic (see MenoClinic below).

CLIENT DELIVERY EXPERIENCE

Founder and Technical Lead · Afryx Labs · Leeds and Yaoundé (remote) — Apr 2026 to present

Kampus, school management platform, delivered jointly with Kaeyros Analytics

- Lead requirements gathering for Fang, a private education group with three institutions (Institut Privé Fang, Institut Supérieur Fang, Centre de Formation Fang), each needing its own tailored software.
- Translate client needs into specifications for a joint Afryx and Kaeyros team of 15, directing delivery alongside the Kaeyros technical lead.
- Run a weekly client loop across 16 meetings to date: demo progress, capture changes and missing features, reprioritise with the team, present the next iteration.
- Coordinate two organisations working as one delivery team, from first client sign-off through active build.

Technical Lead and client point of contact · MenoClinic (University of Bradford industry project) — Oct 2026 to present

AI-assisted patient screening for a private menopause clinic

- Sole point of contact between a three-person team and the clinic's founder, a registered independent prescriber; run requirements sessions focused on clinical outcomes and workflow.
- Designed the system architecture for a clinician-led screening tool: deterministic red-flag rules, an AI-drafted summary linked to source answers, and final clinician sign-off on every case.
- Agreed measurable targets with the client before build: 100% red-flag sensitivity, 85 to 95% triage accuracy and at least 50% screening time saved, evaluated on clinician-approved synthetic cases.
- Scoped the first phase to stay separate from the clinic's live booking system, with UK GDPR and clinical safety requirements captured from the start.

TECHNICAL PROJECTS

pierre-agent-evals · LLM agent evaluation harness · Python — github.com/ByEmG/pierre-agent-evals

- Built a harness that runs an AI agent through a task suite and scores each run with programmatic checks plus an LLM judge, tracking pass rate, cost and latency.
- Classified failures with a six-category taxonomy, for example planning failure and premature termination.
- Cut the agent's step budget from 10 to 3 in a controlled run: pass rate fell from 8/8 to 5/8, with every failure traced to premature termination.
- Found and fixed a configuration bug in the runner and added a regression test for it.

SiteDue · Technical and Product Lead, team of 5 (University of Bradford venture project) — Oct 2026 to present

- Lead a web app that turns completed field jobs into billing-ready records for UK commercial electrical maintenance firms (React, Supabase).
- Coordinate backend, frontend, voice and customer-research workstreams, and shape the product from customer interviews.

SKILLS, CERTIFICATIONS AND LANGUAGES

Client and delivery	Requirements gathering, stakeholder management, solution architecture, iterative delivery, technical communication to non-technical clients
Programming	Python, TypeScript, SQL
AI and LLM	Anthropic Claude API, OpenAI API, LangGraph, tool calling, structured outputs, LLM evaluation
Backend and data	Supabase (PostgreSQL, Row-Level Security), FastAPI, REST APIs
Frontend and tooling	React, React Native, Expo, Vercel, Playwright, Git
Certifications	CMI Level 5 in Management · HarvardX CS109xa: Python for Data Science and Machine Learning · IBM Introduction to Generative AI
Languages	English (fluent) · French (native) · Spanish (conversational)
